

Radiation-curable coating systems with a bottom coat elastic at low temperature

5 Abstract

A multicoat system on a substrate, comprising at least one radiation-curable coating system (F) and at least one elastic intercoat (D) which is located between substrate and  
10 radiation-curable coating system (F) and has a glass transition temperature ( $T_g$ ) of  $-20^{\circ}\text{C}$  or less.
